

**Clostridium Difficel or C-Diff** (bacterium causing illness: a rod-shaped, usually motile, Gram-positive bacterium that can cause serious illnesses including botulism, tetanus, and gas gangrene.)

I am 61 years old and know that because of Shaklee products my body is relatively healthy. That is because I do not need any daily pharmaceutical drugs to function properly. That means I have no high cholesterol, no high blood pressure, no osteo arthritis; no osteoporosis

In March of 2005 I made a trip home to see my father in the nursing home. I came home a very sick person, but because I have a history of IBS I thought that was my problem.

After 10 days of extreme abdominal pain and a foul smelling discharge I finally went to the doctor. During this time I drank lots of Shaklee Performance™ to keep my electrolytes balanced and body hydrated. My doctor tested my stool and I was diagnosed with C-Diff. I was asked if I had been on antibiotics and the answer was no. So, after reading on the internet about C-Diff, I concluded I must have contacted at the nursing home. Anyway I took Vancocin 125 mg (very strong) around the clock for 10 days. At the end the bacteria was still present; however, not as strong (this was verified by tests). At this time I began a regime of 6 Optiflora a day to repopulate my gut with friendly flora. I thought perhaps this would nail the C-Diff. I was also concerned about my IBS. This did not seem to help and so I agreed to start back on the Vancocin 125 mg every other day for a month. Toward the end of the month I began taking the Interferon/Nutriferon and after a week I could tell a significant difference in my body. I know the C-Diff is still hanging around because I can hear it, yes I said I can hear it. I suppose the Interferon kicks in and shuts it up.

I sincerely believe that had I not been relatively healthy, I would not be here today. **Karleen Taylor**

I grew up as a Shaklee kid since I was about 11 years old. I was much healthier after I started the Shaklee supplements. However, as an adult, I still fought two major battles every year. Usually in February and October, I would get a very bad cold, which turned into some form of **bronchitis, sinusitis, or walking pneumonia**. Then I would have to get antibiotics to get better. After the (NutriFeron™) was launched, I have only needed antibiotics ONE time (and how many years has that been now?) For the aforementioned challenges, I would not be without this product! **Cheryl Legg**

My son started taking NutriFeron™ around the middle of the winter in 2005. He usually had terrible **allergies in the spring which would trigger his asthma**. This had happened for the last 7 or so years. I had him on so much Shaklee I didn't think to put him on the NutriFeron™ until I had read an email about it really helping kids with asthma. Well, spring came and he did not have to use any of his preventive medicine for the allergy season. When I went to the doctor for a physical for another child, my doctor asked me how Christopher was doing with his asthma. I said he was doing great. The doctor replied, "That preventive medicine really helps during this season." I said, "He's not on any of the preventive medicine you have given him but I do have him on an immune system builder through Shaklee." He looked surprised. We continue to see **great results with his asthma ever since he has been on the NutriFeron™**. What a great product!! **Tammy Johnson**

Don White's experience with Don White's experience with NutriFeron™---Don was admitted to the hospital at Fort Devens 3 times with pneumonia in 1951. After that he took penicillin at least five times a year for respiratory problems until 1971. You can guess what happened in 1971-Kay found us and he started on Shaklee. Don was able to keep the problem under control when he felt his throat getting scratchy with lots of Vita C plus other supplements including Shaklee DR (at least a bottle each time). Since NutriFeron™ has been available Don has not had a hint of a problem-first time over 50 years. **Gloria White**

I definitely feel stronger with NutriFeron™. I am currently taking it due to some **Hepatitis C antibodies** that have been showing up from a childhood blood transfusion since I was 9 years old.

Now for my success story-

I started taking the Shaklee Immune Building Complex, which was an OLDER formulation of NutriFeron™, I re-tested on Aug. 1st, and met with my hematologist on August 11th (2 weeks ago). My hematologist said that I no longer need to keep testing, and that he would send a letter to my gastroenterologist who was contacted by CDC to prove it that I no longer need to continue testing for the virus. Also, I have not experienced any allergy symptoms in Aug. like I usually do. **Michelle Pappas**

This past week I had to go to the Dr. with a rash on my back. I did not think much of it, but it started itching and hurting. **It was the start of shingles.** Right away the Dr. told me that he would prescribe some medicine for it. Come to find out it was steroids. I informed him that in no way was I going to take them. He said there was no other way to get rid of shingles and that I would be back in to see him in a couple of days if I did not take them. I went home and started reading my nutrition books on shingles and what to take. Jan Christensen gave me a bottle of the new NutriFeron™ so I doubled the doze, and also doubled the dose of B Complex, Vitamin E, Immunity I, Caratomax and Flavomax, plus my Vita Lea and Soy. By Saturday the rash was gone and the itching and hurting was also gone. **Betty**

**Hepatitis C is truly a silent killer** but we were not going to let it come in and wipe out my husband's life with out a fight. I know what it is like to find out that the person you love could have a horrible fate in store for them. Thankfully there was no cirrhosis of the liver and his SGOT and SGPT were not extremely high. Still the medical world gave us little hope but we refused to become hopeless.

WE looked into supplements. Not the ones you can buy at Wal-Mart or get off the TV. WE were fighting a horrible virus. We wanted to go with a company that was established and had medical research behind their products and the only one I could find at that time was Shaklee.

My Husband started taking Vita-Lea, E, C, Garlic and DTX.Liver DTX helps flush out toxins in the liver. It has such herbs as milk thistle seed extract, dandelion, and tumeric. We saw improvement each time we went to the doctor and had his liver tested. The doctor was pleased and just kept saying keep up the good work.

About 2-3 years ago Shaklee came out with their Nutriferon . It helps boost your body's natural immune response process. He started taking 2 a day. Also it is great for allergies. My husband always had sinus infections and he hasn't had one for 2 years.

Well it has been 9 years since that 1st blood test and his blood test's keep getting better and better. The last time we saw his gastrologist he told him that he didn't need to be seen for two years. We saw his hematologist in Oct of 04 and his blood work was SGOT 52 ,SGPT 60,Cholesterol 148,HDL 42 , Triglycerides 175

I've been on Nutriferon for some time now. About two months ago, I had a breast MRI and the doctor found a **lymphnode** he wanted to further check into, so he ordered an ultrasound. I told Nedra Sahr about this as I've been working with her for a while now. She told me to beef up the NutriFeron™ to four a day. That was about ten days before the ultrasound.

I went for the ultrasound on the 19th of August and the technician was going over and over the area. She said there was a lymph node indicated by the doctor on the MRI, but she couldn't find anything. She continued to look for about a total of 30 minutes...but NO LYMPHNODE was apparent. She confirmed her finding, or lack thereof, with the radiologist, who also saw nothing. They advised me to have a follow-up MRI in six months to be sure, but agreed there was nothing there at this time. **Jackie**

I had **severe allergies and chronic infections** for 11 years before Shaklee. As I began taking the Shaklee supplements I started to have less allergy symptoms and less infections. As time went on I had no specific allergic reactions to anything but I would have to blow my nose periodically. When I started on the Immune Building Complex (NutriFeron) I no longer had to blow my nose at all. That was a measurable and specific improvement. I no longer show having had allergies at all. And I have lots of energy. Anybody with severe allergies can tell you lacking energy is a big issue. Shaklee truly did give me my life back. **Tobie Beckwith**

I have three members under me using NutriFeron™ to control their allergies. They say they can't live without it. One had tried using various over-the-counter and also prescription drugs for her allergies and couldn't tolerate using any of them because of a heart condition and the side effects she got from them. I told her to try using NutriFeron™, it might help, and it did! She is so pleased she has found something she can use! **Joyce**

## Viral and Bacterial Infections ,Allergies,Cancer

A few days after returning from Chicago, my Aunt Gerry was diagnosed with pneumonia. She is 86 years old and living in a nursing home. The doctor insisted on a shot of antibiotic followed by oral antibiotics. I said no, let's try this first (I am her power of attorney). I had my bottle of NutriFeron™ from the Conference and I also added CorEnergy. In both cases two, twice a day. I told the staff the product takes 3 days to load. I showed them the clinical trial material. She did not get worse. And by the 5th day, she no longer had pneumonia.

There is resistance by the medical team to attribute the products to her recovery, saying some residents recover who take nothing, some do recover even with the antibiotics. But I know my Aunt Gerry. She has no other health problems and I witnessed her recovery! **Bobbie Stasey**

We started giving NutriFeron™ to my Granddaughter Lindsey when she was only 4 years old. We crushed it and mixed it with peanut butter and organic fruit jam. There is no taste. The reason that we started giving it to Lindsey was that she had started preschool and was getting sick all the time. Her sister Brooke was taking the NutriFeron™ (Brooke was 8 and can swallow pills) and was doing great.

I asked one of the scientists and they said that Shaklee has to put that on the label because it was not tested on children. It is very difficult to get companies to test children on either pills or supplements. One of the scientists at Shaklee told me that she gives it to her three year old with great results.

All my children and grandchildren take the NutriFeron™ with great results. The older ones are 19, 17 and 15. They never get sick. Hope this helps. We also have a lot of allergies in our area and it has really helped. My sons and their wives take it, too. **Janet**

I was just talking with a customer regarding the NutriFeron™ and she reminded me that her grandson was sick all the time. He has cold induced asthma where they would put him on steroids and meds. **The first year on the NutriFeron™ he did not get sick once.** Since then only twice, and the last time was this summer when his mom wanted to see if he really needed to be taking the NutriFeron™ year round. She stopped giving him the NutriFeron™ and he got a cold that turned into a bad case of the asthma. They had to use the steroids and a steam system to help him breathe. He is too young to use an inhaler. They have found the NutriFeron™ to keep him healthy and off the medications. What a blessing to this family and a sure sign that children will benefit from using this product. **Patty Palma**

A little background although most of you know that I have had a **skin condition (Mycosis Fungoidis) for 16 years and it took 6 years for it to be diagnosed.** I have had two rounds of radiation and the mustard/nitrogen cream (a topical chemotherapy) twice. The first round of radiation was successful (one spot). The second round of radiation was done on 6 large spots including a new one that just started developing but all six areas ended up 'moving' to a different spot close by. While taking radiation I had a new spot developing under my arm. Both the radiologist and my doctor mention full body radiation. I refused because I felt if it could not get to my skin it would go inside and I couldn't scratch inside. It was a terrifying itch - I have actually bruised my skin because I was scratching so hard trying to get to the itch. When first diagnosed the Oncologist told me the cancer was not in my blood stream..."they only use your blood stream to get to your skin."

While at the Chicago convention, I shared with one of the attendees about my skin and she said I needed to take 3 of the NutriFeron™ 3 times a day. So I began that on Friday, August 12th, and Wednesday of the following week I noticed that the nodules in my left upper arm were smooth. I could hardly believe it. I did not tell anyone immediately because I wanted to be sure they were gone.

Yesterday, Aug. 22nd I visited my doctor and she was totally amazed as well. She said not only were they gone but there was a difference in the texture of my skin (I was beginning to have 'alligator' skin. I still have one trouble spot which had been quite large but is smaller. She took a biopsy of that and we will know the results in a couple of weeks. Another interesting fact is that my blood pressure was lower yesterday than it has been in 4 years!!! **Marcie**
